

Capture plan — where to stand, where to aim, which wall is which  
BEDROOM (sheet rows R1.\*)

BATHROOM (sheet rows R2.\*)

dark line = wall to measure  
green dot = where to stand  
Wall ids match the element column of measurements\_to\_fill.csv exactly.  
Grey block = the built-in cupboard. It is fixed, so it counts as wall.  
No lengths, areas or scale bar appear here: the tape readings are the ground truth that scores magicplan, so seeing its numbers first would make them worthless.
